Subject: [External] Solar power

Dear PSC,

I'm reaching out over some troubling articles I've read in the paper and seen on the news concerning Dominion Energy raising fees for solar customers. I feel, as a coastal resident, the opportunity to do everything I can to slow down climate change is very important. I was excited when my HOA allowed for the use of solar panels, and signed right up. I think it's my responsibility to do everything I can to slow global warming. I think the increased fees are meant to slow the development of solar in South Carolina and will continue to contribute to increasing temperatures and global warming. Please do everything you can to allow the growth of solar in South Carolina!

Sincerely,
Greg Pfeninger

Johns Island, SC
